

NEW GENERATION DIGITAL LEVEL METER

NEW

New products adopt numerical circuit improved anti-jamming. The display window for WL series has background bright light, while no for DL series. Valued function of storage, read and delete the measured data, store data upto 500.

DIGITAL LEVEL METER AND DIGITAL GRADIENTER

Digital Electronic Level Meter was developed in early 1980`s by the company. It is characterised by high accuracy, fast speed and intuitionistic readout and suit to inspect straightness, flatness and parallelism. We also developed the measuring software and interface to computer, make it possible a measuring software and interfato computer, make it possible a measuring system, which improved the speed and accuracy of inspection. Thus our Digital Level Meter is authorised as import substitute products by Chinese Government. In the past several years, in order to provide better products and service to customers base on SD series, qppic developed DL and WL series of new generation of Digital Level Meter and Digital Gradienter, increased many convinient and applied functions, realized the precision measuring of small angles and big angles.
