

Basic measuring software

Mainly include the measuring program of straightness, parallelism and flatness. All the level meters could achieve the function of differential measuring through the basic measuring software.

Basic Module of geometry measuring software

1. Absolute position measurement for linear
2. Twist measurement for long and narrow plane
3. Parallelism and twist measurement for long and narrow multi-planes
4. Levelness measurement for square plane

Improved Module of geometry measuring software(Optional)

5. Joint measurement for multi square plane (could evaluate the parallelism and relative position of planes)
6. Parallelism and levelness measurement for annular plane
7. Measurement for perpendicularity and squares
8. Straightness and parallelism measurement for machine tool guideways
9. Twist measurement for machine tool guideways.
10. Straightness measurement between principal axis and guideways of machine tool
11. Levelness measurement for rotary table.
